

## **Confined Space Hazard Analysis Form**

This form is designed to assist Environmental Health and Safety (EHS), or a EHS designee, with identifying permit-required confined spaces and the hazards that are (or may be) present in them. In order for a space to be designated as a permit-required confined space, it must meet the requirements in section 1 of this form (white) and at one of the requirements in sections 2-5 (blue). If a space is determined to meet the requirements of a permit-required confined space, it should be recorded on the **UNO Permit Confined Space List**.

	<b>Date:</b>	<b>Location:</b>
<b>1</b>	Is the space large enough to enter and perform work, have limited or restricted means of entry/exit, and not designed for continuous occupancy? Explain:	
<b>2</b>	Does the space contain, or could contain, a hazardous atmosphere? This includes atmospheres that are explosive, toxic, oxygen deficient or enriched, and asphyxiant. Explain:	
<b>3</b>	Does the space contain material(s) that have the potential for engulfment of an entrant? This includes materials like water, soil, sediment, etc. Explain:	
<b>4</b>	Does the space have an internal configuration that an entrant could be trapped or asphyxiated by? This includes inwardly converging walls and a floor which slopes downward and tapers to a smaller cross-section? Explain:	
<b>5</b>	Does the space contain any other recognized serious safety or health hazard? This includes high temperatures, moving equipment, electrical hazards, STF hazards, loud decibel levels, etc. Explain:
