

Department of Mathematical and Statistical Sciences Retroactive Credit

Students wishing to pursue retroactive credit for Mathematics should first arrange an advisement meeting with a faculty member within the Department of Mathematical and Statistical Sciences. The department will then grant retroactive credit in Mathematics according to the following conditions:

- a) A student who has studied Calculus in high school may enroll directly in Calculus II (MATH 1960). Completing this with a C- or better on the first attempt will earn an additional 5 credits for Calculus I (MATH 1950).
- b) A student who has studied calculus in high school and who feels prepared to enter directly into Calculus III (MATH 1970) may do so after demonstrating readiness by earning a C- or better on a comprehensive examination over MATH 1960. Completing MATH 1970 with a grade of C- or better on the first attempt will earn a total of 9 credits for MATH 1950 and MATH 1960.
- c) A student who has documented evidence of learning material at the college level may be allowed to waive the requirements for the entire Calculus sequence (MATH 1950, 1960, 1970) after demonstrating readiness by earning a C- or better on a comprehensive examination including topics from MATH 1960 and MATH 1970. However, in this event, a maximum of 9 hours credit will be awarded. A student pursuing a Mathematics Major will be required to complete an additional 4 credit hours of advanced Mathematics or Statistics to complete the program.
- d) The opportunities in (a), (b), and (c) above are one-time only. If a student does not successfully complete the prescribed course or exam on the first attempt, they must take the prerequisite course. There is no charge when retroactive credit is awarded.

Retroactive credit will NOT be conferred:

- a) For courses below MATH 1950 Calculus I.
- b) Based upon completion of courses taken at any other institution, including other University of Nebraska institutions.
- c) For courses for which the student already has Advanced Placement or previous college credit.

After successful completion of the advanced courses or the comprehensive exam, the student should report to the Department or Core Curriculum Chair of Mathematical and Statistical Sciences with an official copy of the grade. The Chair will then complete this form and submit it to the Registrar's Office, EAB 105 Attn: Joan McCullough.

The following student should receive _____ hours of credit for _____ due to the successful completion of _____ with a grade of _____ during the _____ term.

Date

Department or Core Curriculum Chair, Mathematical and Statistical Sciences

Student Name _____

I.D. _____
